Limited verification record T01 for two public mathematical manuscripts

Publication metadata	Value
Bibliographic ID	MGL-REF-001
Publishing entity	Masao Gate Labs
Public summary version	v0.1.1
Original report version	T01 v0.1.0
Experiment date	2026-10-08 JST
First published	2026-11-11 JST
Last updated	2026-11-11 JST
Review IDs	MGL-MATH-001 / MGL-MATH-002

Scope indicators

Item	Status
Source correspondence	Saved report matched to the pinned manuscript catalogue
Experiment rerun	Experiment not rerun in this publication pass
Whole proof	Whole proofs unevaluated

Summary editor MGL-AI-CHP-003 (CHP03). The original implementation and experiment operator is Codex, with fixed researcher ID UNKNOWN. Third-party independent review remains unperformed.

This is a summary of MGL_MINIPILOT_OPENAI_MATH_T01_v0_1_0_公開数学比較検証報告_20261008.docx. This publication pass checked the saved report against the pinned manuscript catalogue. The experiment pack and complete proofs were not rerun or re-reviewed.

Sources

The original report used official TeX at commit adc7f1241b42e322a6451854ab7e4b4c146bf78a, rendered with pdflatex and then converted to text. Its input was obtained through that rendering pipeline.

- MGL-MATH-001, Family 088, A product counterexample to the simplex maximum for projection-body volume
- MGL-MATH-002, Family 353, A Smooth Nonquadratic Entire Affine Maximal Graph in Dimension Ten

Pinned official catalogue

MGL-MATH-001

The manuscript compares a product of two ten-dimensional simplices with a twenty-dimensional simplex. The report records a separate Python integer/Fraction check of 22,355,476 / 22,020,096 > 1, with positive difference 335,380. The geometric volume derivation and full proof remain unverified.

The extraction pipeline dropped the denominator from the extracted statement and linked proofs to 1 of 6 declarations. This observation cannot establish missing proofs in the source manuscript.

MGL-MATH-002

The manuscript constructs a smooth nonquadratic entire affine maximal graph in dimension ten. The pipeline linked proofs to 2 of 6 declarations. The global solution and full proof remain unverified.

Shared observations and open work

The report describes 22 conditions. Four output-side number/assumption modifications were stopped. A false numerical comparison deliberately injected into test input was not stopped by the current Profile. This test variant supplies no counterexample to the original manuscript.

Whole-manuscript mathematical status remained NOT_EVALUATED. Lean compilation and Comparator execution were unperformed. The original declaration identifier OAI.Paper092 and catalogue Family 088 are retained as separate identifiers. There were zero live LLM calls and learning effects were unmeasured.

Resumption requires checking and rerunning the T01 pack with frozen input, source hashes, code and observations, preserving mathematical structure during extraction, and verifying individual mathematical claims.

Revision history

Date (JST)	Public version	Changes	Record
2026-11-11	Unnumbered	First publication	Record
2026-11-11	v0.1.0	Added version, dates, bibliographic ID, and citation guidance; zero additional verification results.	Record
2026-11-11	v0.1.1	Added structured scope indicators and aligned the Japanese and English review and citation indexes; zero additional verification results.	This edition
